GROUND COVERS AND GRASSES

eremophila kalbarri carpet, prostrate

eremophila glabra, prostrate

lemon scented grass

sturt desert pea

pigface

myoporum parvifolia

NOTE:

This catalogue is a group work in progress based on our own trial and error. These species have proven to be robust enough to survive the somewhat extreme conditions.

The photos are examples taken from the internet, not from Copley. We have taken these examples as a reference to the mature forms of the plants to help us with planning our gardens.
